ADVICE TO "FLU" CONVALESCENTS

SPAIN AND ENGLAND REPORT INCREASE IN TUBERCULOSIS AFTER INFLUENZA EPIDEMIC.

U. S. Public Health Service Warns Public Against Tuberculosis. One Million Cases Tuberculosis in United States—Each a Source of Danger.

Influenza Convalescents Should Have Lungs Examined—Colds Which Hang On Often Beginning of Tuberculosis. No Cause for Alarm if Tuberculosis is Recognized Early—Patent Medicines Not to Be Trusted.

- * Beware tuberculosis after influenza. No need to worry if you take precautions in time.
- * Don't diagnose your own condition. Have your doctor examine your lungs several times at monthly intervals. Build up your strength with right living, good food and plenty of fresh air.
- * Don't waste money on patent medicines advertised to cure tuberculosis.
- * Become a fresh-air crank and enjoy life.

Washington, D. C.—(Special.)—According to a report made to the United States Public Health Service, the epidemic of influenza in Spain has already caused an increase in the prevalence and deaths from pulmonary tuberculosis. A similar association between influenza and tuberculosis was recently made by Sir Arthur Newsholme, the chief medical officer of the English public health service, in his analysis of the tuberculosis death rate in England.

In order that the people of the United States may profit by the experience of other countries the Surgeon General Rupert Blue of the United States Public Health Service has just issued a warning emphasizing the need of special precautions at the present time. "Experience seems to indicate," says the Surgeon General, "that persons whose resistance has been weakened by an attack of influenza are peculiarly susceptible to tuberculosis. With millions of its people recently affected with influenza this country now offers conditions favoring the spread of tuberculosis."

One Million Consumptives in the United States. "Then you consider this a serious menace?" was asked. "In my opinion it is, though I hasten to add it is distinctly one against which the people can guard. So far as one can estimate there are at present about one million cases of tuberculosis in the United States. There is unfortunately no complete census available to show exactly the number of tuberculous persons in each state despite the fact that most of the states have made the disease reportable. In New York city, where reporting has been in force for many years, over 35,000 cases of tuberculosis are registered with the Department of Health. Those familiar with the situation believe that the addition of unrecognized and unreported cases would make the number nearer 60,000. The very careful health survey conducted during the past two years in Framingham, Mass., revealed 200 cases of tuberculosis in a population of approximately 15,000. By these proportions hold true for the United States as a whole they would indicate that about one in every hundred persons is tuberculous. Each of these constitutes a source of danger to be guarded against."

What to Do. In his statement to the public Surgeon General Blue points out how those who have had influenza should protect themselves against tuberculosis. "All who have recovered from influenza," says the Surgeon General, "should have their lungs carefully examined by a competent physician. In fact, it is desirable to have several examinations made a month apart. Such examinations cannot be made through the clothing nor can they be carried out in two or three minutes. If the lungs are found to be free from tuberculosis every effort should be made to keep them so. This can be done by right living, good food and plenty of fresh air."

Danger Signs. The Surgeon General warned especially against certain danger signs, such as "cough" and "colds which hang on." "Those," he explained, "were often the beginning of tuberculosis. If you do not get well promptly, if your cold seems to hang on or your health and strength decline, remember that these are often the early signs of tuberculosis. Place yourself at once under the care of a competent physician. Tuberculosis is curable in the early stages. Patent Medicines Dangerous in Tuberculosis. "Above all do not trust in the misleading statements of unscrupulous patent medicine takers. There is no specific medicine for the cure of tuberculosis. The money spent on such medicines is thrown away; it should be spent instead for good food and clean living."

STEFANSSON STRONG AND HEARTY AGAIN

Viljalmar Stefansson, discoverer of the blood Eskimos and five new islands in the Arctic and who has been studying the barren wastes of the far north for five years for the Canadian government, arrived recently in New York. Despite his serious illness through which he recently passed he looks as strong as a mule ox.

SAVE 16,000,000 BUSHELS OF WHEAT THAT FORMERLY WAS LOST IN THRESHING

Farmers, Urged by Food Administration, Provide Seven Extra Loaves of Bread for Every American.

By adopting cleaner threshing methods and by literally combing harvest fields to gather grain formerly wasted, threshermen and farmers of the United States this year saved fully 16,000,000 bushels of wheat, estimated as equivalent to about seven one-pound loaves of bread for every person in the country. This result, accompanied by corresponding savings of barley, oats, rye and other grains, is shown by reports from 33 grain states to the U. S. Food Administration. Other states, although not prepared to furnish definite figures of conservation in the grain fields, report greatly reduced harvest losses.

NO ONE SUFFERED HERE. The marvel of our voluntary food-saving, now that we are getting results, is that no one ever actually suffered any hardship from it; that we all are better in health and spirit and better satisfied with ourselves because of our friendly self-denial.

Candy Money Aids Orphans. Giving up their pennies for candy, the children in the grades at the Lincoln school in Cleveland are turning over their spending money to swell a fund for French orphans. Enough money has already been given to provide for the adoption of six orphans.

USE THE HANDKERCHIEF AND DO YOUR PART. The public is urged to use handkerchiefs to protect themselves from germs spread by sneezing and coughing.

U. S. HEALTH SERVICE ISSUES WARNING

Increase in All Respiratory Diseases After the Influenza Epidemic Probable.

Influenza Expected to Lurk for Months. Now to Guard Against Pneumonia, Common Colds Highly Catching—Importance of Suitable Clothing—Could Save 100,000 Lives.

Washington, D. C.—With the subsidence of the epidemic of influenza the attention of health officers is directed to pneumonia, bronchitis and other diseases of the respiratory system which regularly cause a large number of deaths, especially during the winter season. According to Rupert Blue, Surgeon General of the United States Public Health Service, these diseases will be especially prevalent this winter unless the people are particularly careful to obey health instructions.

Common Colds Highly Catching. It is encouraging to observe that people are beginning to learn that ordinary coughs and colds are highly catching and are spread from person to person by means of droplets of germ laden mucus. Such droplets are sprayed into the air when careless or ignorant people cough or sneeze without covering their mouth and nose.

Suitable Clothing Important. "Still another factor in the production of colds, pneumonia and other respiratory diseases is carelessness or ignorance of the people regarding suitable clothing during the seasons when the weather suddenly changes, sitting in warm rooms too heavily dressed or, what is even more common, especially among women, dressing so lightly that windows are kept closed in order to be comfortably warm. This is a very injurious practice.

Drop of Infection Explained in Pictures. The Bureau of Public Health, Treasury Department, has just issued a striking poster drawn by Herrmann, the well-known Washington cartoonist. The poster exemplifies the modern method of health education. A few years ago, under similar circumstances, the health authorities would have issued an official dry but scientifically accurate bulletin teaching the role of droplet infection in the spread of respiratory diseases. The only ones who would have understood the bulletin would have been those who already knew all about the subject.

Drop of Infection Explained in Pictures. The Bureau of Public Health, Treasury Department, has just issued a striking poster drawn by Herrmann, the well-known Washington cartoonist. The poster exemplifies the modern method of health education. A few years ago, under similar circumstances, the health authorities would have issued an official dry but scientifically accurate bulletin teaching the role of droplet infection in the spread of respiratory diseases. The only ones who would have understood the bulletin would have been those who already knew all about the subject.

USE THE HANDKERCHIEF AND DO YOUR PART. THE PUBLIC. DON'T GET WELL PROMPTLY, IF YOUR COLD SEEMS TO HANG ON OR YOUR HEALTH AND STRENGTH DECLINE, REMEMBER THAT THESE ARE OFTEN THE EARLY SIGNS OF TUBERCULOSIS. PLACE YOURSELF AT ONCE UNDER THE CARE OF A COMPETENT PHYSICIAN. TUBERCULOSIS IS CURABLE IN THE EARLY STAGES. PATENT MEDICINES DANGEROUS IN TUBERCULOSIS. ABOVE ALL DO NOT TRUST IN THE MISLEADING STATEMENTS OF UNSCRUPULOUS PATENT MEDICINE TAKERS.

Our exports since '18 country entered the war have justified a statement made by the Food Administration shortly after its organization, outlining the principles and policies that would govern the solution of this country's food problems. "The whole foundation of democracy," declared the Food Administration, "lies in the individual initiative of its people and their willingness to serve the interests of the nation with complete self-effacement in the time of emergency. Democracy can yield to discipline, and we can solve this food problem for our own people and for the Allies in this way. To have done so will have been a greater service than our immediate objective, for we have demonstrated the righteousness of our faith and our ability to defend ourselves without being Prussianized."

KEPT PLEDGE TO SEND BREAD

American Nation Maintained Allied Loaf Through Self-Denial at Home Table.

AVERTED EUROPEAN DESPAIR.

With Military Demands Upon Ocean Shipping Relieved, World is Able to Return to Normal White Wheat Bread.

Since the advent of the latest wheat crop the only limitation upon American exports to Europe has been the shortage of shipping. Between July 1 and October 10 we shipped 63,250,300 bushels. If this rate should continue until the end of the fiscal year we will have furnished the Allies with more than 237,500,000 bushels of wheat and flour in terms of wheat.

But last year the tale was different. Only by the greatest possible saving and sacrifice were we able to keep a steady stream of wheat and flour moving across the sea. We found ourselves at the beginning of the harvest year with an unusually short crop. Even the most optimistic statisticians figured that we had a bare surplus of 20,000,000 bushels. And yet Europe was facing the probability of a bread famine—and in Europe bread is by far the most important article in the diet.

Inquire at this office. 12 FOR SALE—5 pure-blood Duroc boar pigs, 1 pair work mules, 1 1/2 steel axle Winona wagon (new), 1 2-in. John Deere mountain wagon with California rack bed (new), 1 2 1/2-inch Peier Schuttler ore wagon, 2 1/4 Winona ore wagon. Apply Ed Ellis, 1305a.

YANK INFANTRY IS HELPED BY AIR BARRAGE

Low-Flying Planes Assist in General Pershing's Advance.

FOE IS HARASSED AT NIGHT

German Aviation Squadrons Broken Up and Notable Victories Won by Individual American Flyers — in Pairs, Singly and in Groups They Fought and Vanquished German Formations of From Nine to Twenty-Three Planes.

Low-flying airplanes have been used by the Americans in the advance now in progress to cover the forward movement of the infantry by laying down what amounted to a barrage. Often the aviators have flown as low as 150 feet.

There has been some notable air fighting, with numbers of victories scored by the Americans. Among these may be mentioned one by Lieutenant Hoover, who brought down a monoplane near Slivy, while Lieutenant White attacked two Fokkers in quick succession, bringing down one at Montfaucon and the other to the east of that place.

Lieutenant Buckley and Lieutenant Curtis got a Rumpier biplane near Brienneles, and Lieutenants Buckley and Butz and Houston Woodward of Philadelphia drove down another Rumpier out of control near Fleville.

A total of seven tons of bombs was dropped upon Longuyon, Audun, Trieux, Gouraincourt and Stensy by French and Italian aviators, while the British bombed Audun, Metz-Sablons, Mazieres, Ars, Thionville and Fresency. American aviators dropped a quantity of bombs on Etain.

Airmen Attack at Night.

In no previous engagement have the pursuit machines displayed greater indifference to weather conditions. Night flying has become common, the airmen starting off in the darkness and landing by the light of flares. Their course is determined by flash signals. Raids by the airmen heretofore have been confined almost wholly to the daylight hours in operations of this character, but the Germans have been forced in this engagement to combat swift attacks upon their balloons by airplanes appearing out of the darkness and clouds and opening on their troops with machine-gun fire while the men were trying to get a period of rest.

American pursuit aviators have played their part fully in the offensive, and, despite greater activity than usual, have come through as undisputed masters of the air in this region. They went out in pairs, singly, and in small groups. They fought and vanquished enemy formations ranging from seven and nine to twenty-three machines and rendered great aid in the advance.

Aerial patrols left their airdromes Thursday before dawn and were over the sector of attack by sunrise. They began their operations by launching a successful raid against the German balloons, six of which were brought down during the day. Other aviators directed a continuous barrage throughout the day all the way from Chailion-sous-les-Cotes to Le Mansel at an altitude never exceeding 1,000 yards. Flying at this low height, these patrols were able to protect the observation airplanes which were doing work for the infantry.

One pursuit group engaged in 23 combats with enemy airmen, destroying two enemy machines and bringing down out of control a number of others. Other Americans flew over the German lines as far as the Moselle, southwest of Metz. They found few German machines, but drove back all they chanced to find. The work of the observation airplanes was virtually undisturbed by the enemy machines.

A series of deep raids into enemy territory was made during the day. The first of these resulted in 13 combats, in which ten German airplanes were destroyed. The second was made at a low altitude to bomb concentrations of enemy troops and convoys.

Three German airplanes were engaged and one was probably destroyed. A third raid was made in conjunction with a bombing group against the railroad junction at Etain, and resulted in the successful bombardment of the objective.

The Americans met German fliers during the bombing operation and are believed to have destroyed three of them.

Long-distance reconnoitering flights also were carried out and valuable information concerning German troop movements was obtained.

Observation Machines Busy.
American observation aviators played their customary important, though little spectacular, part in the advance of General Pershing's forces. They carried out 75 missions on Thursday, starting from their bases before daylight and working until long after dark. They came in contact with German infantry on 35 occasions.

The aviators were divided into groups. The first section was assigned to an infantry unit to report its progress. The second did observation work, watching the general advance, the location of the enemy troops and the movements of his batteries. The third

IRELAND CLAIMS MANGIN

Latest French Hero Said to Be Son of Irishman.

Ireland claims the latest "French" hero as her own. General Mangin is the son of an Irishman who fought against the Hun in 1870, then settled down in France.

He is said to be blessed by the watchful spirit of a French clairvoyant who has won fame since his recent successes. Following Nivelle's failure and removal, Mangin was placed on the retired list. The madame was displeased. She sought a two-minute interview with "the Tiger," and the two minutes were extended to an hour, after which Clemenceau restored Mangin to command of the French left wing, with results fully known to the crown prince.

FLYING CAMP IN IRELAND

Yankee Airdrome Shipped to Irish Town in Sections.

An American aviation station is growing in a town in Ireland with the speed of the early morning tent city which springs up when the circus comes to town in the States.

Captain Herbster is in command, and under his supervision a miniature town is springing up, carefully planned, mostly wooden construction, but neat and methodical.

An example of Yankee efficiency, the one big airdrome already in place was designed in America, built there in sections, shipped across the Atlantic and erected in record time. It is a remarkably efficient product of American engineering ingenuity.

Aviators in training there will help run down the Hun who preys under the North sea.

UNMASK A GERMAN TRICK

Americans Find They Shift Their Batteries and Soon Checkmate It.

There is a battle of wits as well as of guns along the American front in the mountainous Lorraine country near the southeastern end of the western front. Germans try to deceive the American intelligence officers by moving their machine guns and batteries to a new position every night.

The Americans solved this problem by using a series of tracing maps which may be made daily and superimposed upon one another. When these are compared the various points to which the guns have been moved are indicated. Then comes the opportunity for the American artillery to do its work upon them.

This system has proved very valuable in locating the heavy batteries behind the German lines.

section was attached to the corps for general scouting and observation work.

The American machines not only carried out this work, but themselves went over to the offensive repeatedly and spent much time in attacking enemy formations.

The aviators returned to their hangars at night with the wings of their machines often riddled with bullets. A ground mist, especially in the morning necessitated their descending to a level of only 75 feet above the fighting units, while over the American infantry the aviators encouraged the men and flew so low that they could hail the advancing fighters.

One wounded man lying on the ground even turned over and waved cheerily to an airplane as it flew close above him. One of the machines which sighted a big group of Germans swooped down upon it. The machine gun jammed just as the aviator was about to fire. The airplane turned so that the observer might fire from another position when it was discovered that the Germans were prisoners in the hands of five American soldiers.

Another aviator saw a group of prisoners go by under escort of a handful of Americans. The Germans were manfully doing the goose-step at the bidding of their captors.

One pilot had so narrow an escape from death that a glass eye-piece was shot out of his goggles. Putting up his hands to adjust the goggles another bullet grazed both his thumbs.

Still another pilot received an explosive bullet through the front of his outer fur coat, setting it on fire. He was not wounded.

Pigeons Bear News of Victory.

Carrier pigeons have proved themselves to be of inestimable value in the offensive by supplanting telephone and telegraph wires connecting the advanced posts with the bases at the rear. The birds have been used freely and have repeatedly flown from outposts to the divisional or corps headquarters with messages of vital importance, such as calls for a barrage fire, news of unexpected difficulties, or word of an advance.

The birds were carefully trained and tested before the beginning of the offensive. They were fed especially well at the base stations and were understood and neglected at the front, so that they would return to the bases gladly when released.

Part of the pigeons are from the French army and part from the American. Some birds were taken over by mistake from the French and it was believed that they had too little training to permit them to travel more than five miles. They were released from the front line with important messages for a point 12 miles away. Despite their youth and inexperience the pigeons all succeeded in reaching their stations.

By means of the pigeons generally has come the first news of the capture of towns and important positions.
