## MICKIE SAYS-

Uncle Sam and His Nephews, the States, Are Collecting Over a Billion Dollars in Yearly Tolls on Motor Vehicles and Fuel

More Than Meets the Nation's Billion Dollar Highway Building Bill-Thomas H. MacDonald, Chief of the U. S. Bureau of Public Roads, Tells Striking Details,

## By JUDSON C. WELLIVER

America has reverted to the ancient system of collecting

tolls wherewith to build and maintain highways. In 1925 these tolls amounted to \$1,094,000,000, collected through motor licenses, gasoline taxes, property, corporation, income production and other taxes on automobiles, automobile

manufactures, the petroleum industry, etc. In the same year \$1,003,000,000 was spent on rural roads. It took near a century to build \$20,000,000,000 worth of railroads. A highway system costing that much will be created in twenty years at present rate.

proved

These are some of the high points | as superior to state boundary lines as presented by Thomas H. MacDonald, are railroads. Chief of the Bureau of Public Roads, Department of Agriculture, in an in-

terview on highway development. "The equipment of this continent with modern roads has been the most amazing provision of a public utility that any community ever accomplished in a similar period," said Mr. MacDonald. "Historians say the Roman Empire was held together by its highway system, radiating from Rome to the Provinces. But America has converted a continent into a neighborhood within a few years.

"This accomplishment really repre sents the inauguration of a new system of taxation; a system of licenses privileges or classes of property, the proceeds being dedicated to highway

development. "For 1925 state taxes on gasoline aggregated \$143,000,000. Add to that tion and licenses; \$150,000,000 as property taxes on the 20,000,000 automobiles: \$143,430,709 as the Federal excise tax on automobiles, parts and accessories for 1925; \$50,000,000 to collected from motor drivers. The total reaches approximately \$749,

Nearly \$1,100,000,000 Yearly Tolls "But these figures do not include income and corporation taxes derived they include state, local, production, corporation or income taxes of the petroleum industry. Yet that indusis considerably more than the entire amount spent on country roads.

"You observe that I have not inernment has contributed \$460,000,000 to help the states build roads. That is considerably less than half of what the country spent on roads in either eight years, while the Government was distributing that \$460,000,000 to the states, it collected \$873,000,000 in internal revenue taxes on motor cars, parts and accessories. Other hundreds of millions were collected in income and corporation taxes from motor car manufacturers and dealers. Thus it appears that Federal contribution to roads as compared to the contribution of people who make and use the cars and the gasoline has been decidedly modest.

"But, while Federal contribution is der construction. The four will only about 10 per cent of highway ex- a little more than \$2,000,000, the pense, it has accomplished results altogether out of proportion to its amount. First, it was an incentive to the States. The Government required them to invest as much as it contributed. Then the Government takes | importance, both locally and nat part in a general supervision of con- ally, has been needed for generati struction and a share in determining routes. So we have built roads on better standards, and have got them organized into a truly national system instead of forty-eight state sys-

## Unifying the Road System

"Some day it will be realized that this was the most valuable contribution. Driving from Boston to New York, a man may pass through four Every one might have a splendid highway system; but if these did not articulate at the state lines the trip would be almost impossible. Thanks to the systematization under Federal influence, country roads are vina Williamson were Canille visitora

highway development."

According to the American Petroleum Institute, the gasoline tax was first imposed in 1919 in Oregon. It has now been adopted by all the states except New York, Illinois, New Jersey and Massachusetts. The ton-"The Federal highway act of 1921 dency has been continually to increase the rate of tax per gallon. As ing system of roads be designated late as 1921 gasoline taxes for the entire country were only about \$5,000,which Uncle Sam would give assist-000; in 1922, \$12,000,000; in 1923, almost \$37,000,000; in 1924, \$79,000,000, and in 1925, \$142,937,749.

With good prospects that the "gas" tax will be adopted soon by states which do not have it now and with the gallonage rates being increased in other states, it is calculated that this tax alone will soon raise \$200,000,000 a year, quite possibly during 1926.

OF THE

## SANTA CRUZ COUNTY BOARD OF SUPERVISORS

OFFICE OF THE BOARD OF SUPERVISORS, Nogales, Arizona, April 5, 1926.

The Board of Supervisors met pursuant to adjournment of March 1st, 1926. Present: Chairman James L. Finley, Members Robert A. Campbell, and Hugo W. Miller, and Clerk A. Dumbauld.

The following committee from the Nogales Chamber of Commerce appeared before the Board in reference to the re-distriting of the county into ores must gain respect for the men supervisorial districts: John Jund, James A. Harrison, Manuel Escalada, who invest their lives and their capi- and P. D. Claggett. A map was submitted as the proposed division as tal in producing these invaluable worked out by the committee. After a discussion and consideration of other possible divisions was had, the following motion was made:

Motion of Miller that one of the two proposed divisions as submitted by out such mineral production. No in the committee be accepted. This motion was lost for want of a second. Motion of Campbell that the matter of division be taken under advise-

> Campbell and Finley voting "yes" and Miller voting "no." A petition signed by 70 qualified electors in the Union High School District asking the Board of Supervisors to call an election in said Union High School District to determine whether or not said Union High School

The above was referred to the County Attorney for his opinion. After

Bisbee-Calumet & Arizona Mining consideration the County Attorney gave the following as his opinion: "It is the opinion of the County Attorney and also the Attorney General

of dissolving it or permitting the withdrawal from it of any portion thereof. "The eletion petitioned for should be denied for the reason that the Co. retimbering main shaft from top Statute mentioned in the petition relates to the dissolution of County Union to 337-foot level, preparatory to start. TWO MODELS FROM PARIS

nedallions, but more particularly for lengthening the hem lines of fashionable skirts, it has captivated the are many high-necked blouses of plain fancy of designers. Godets of lace let or fancy silks and the scarf collar is into skirts, tiered skirts of lace an important feature in blouses of flouncings, inserts and panels of lace, this type. The jabot is also an imdyed to match, all help build the airy portant note in these blouses, which evening frocks for summer. Then are usually finished by a wide hip band there is the revival of the lace petticoat worn under a bouffant taffeta, blouse at the right of the sketch. opening in a panel down the front, the robe-de-style with plain silk bodice and bouffant skirt of lace flouncing, white crepe de chine for wear with and finally the all-lace dress, of white skirts. They are made with which one example is pictured here, either high, open or round necklines The lure of the feminine lies in lace and long sleeves. and in lacy materials, and it is a universal lure-among the civilized.

It takes but a moment's thought to turn off the lights when leaving the room, even for a few minutes. If the the note of greatest importance here. inconspicuous backgrounds. In the gas or electricity is turned off before

the dish is removed from the stove it will save many a bill. Appetizing Dishes. A delicious salad which takes but a few moment to prepare is:

Apple and Onion Salad.-Dice nice flavored apple very fine, add one-fourth as much shredded or finely diced bermuda onion, season with a teaspoonful of sugar, one-half teaspoonful of salt and a

few dashes of cayenne. Pour over tablespoonful of olive or corn oil and let stand for half an hour, then add mayonnaise mixed with cream and stir well before serving. Serve on lettuce. The addition of a half-dozen minced dates, omitting the sugar, adds much to the flavor of the

salad, though it is very good without. A nice luncheon dish is poached eggs served on a nest of seasoned spinach. Open a can of spinach if the fresh is not at hand, season highly with butter, after draining. Save the spinach water and give it as a drink to any member of the family who needs iron or vitamines.

Beef Olives .- Take thin slices of rare roast beef and roll each around a thin slice of bacon which has been fried until transparent but not crisp. Tie up or skewer with a toothpick and broll. Add the fat from the bacon to some of the roast beef gravy, season with worcestershire sauce and a tablespoonful of currant jelly. Serve

Corned Beef Hash,-Chop cooked corned beef very fine, then add the chopped vegetables from a boiled dinner, also chopped, using three times as much of the vegetable as the meat. Put into a frying pan, moisten with some of the broth from the vegetables, stir and heat until very hot; serve

with a poached egg. Chicken Terrapin.-Melt four tablespoonfuls of butter, add the same quantity of flour, pour over one-half cupful of chicken broth and one-half cupful of mushroom liquor, also one and one-half cupfuls of cream; senson, add a half-cupful of sliced mushrooms. and three hard cooked eggs chopped and a pint of sliced dark meat of the chicken with the minced chicken

## Five-Minute Cabbage Is Best to Save Vitamines

"I was boiled to death!" read the nscription on the cabbage tombstone "vitamine cemetery" which formed part of a vividly instructive pantomime staged by some school children not long ago. The excellent lesson of this entertainment, showing the importance of a short cooking period for all the vegetables valued rections for preparing many common vegetable foods to conserve their vita nines, they also learned how to avoid

'boiling them to death.' In addition to the fact that the vitamines in cabbage are destroyed by long cooking, there are several other are often forced down or drawn up advantages in cooking this vegetable as little as possible. The directions given below by the United States Department of Agriculture give delicately flavored crisp cabbage dish which can be prepared in a very few minutes just before a meal, or pre pared early in the day and quickly heated at serving time. The color is very attractive when green cabbage is used, and the kitchen and house are not filled with cabbage odor,

Wash and chop finely enough cab bage to make one quart. Simmer for about two minutes in one pint of hot milk, adding one and one-half reaspoonfuls of flour. Season with salt and pepper. Cover the cabbage and heat for three or four minutes without allowing the mixture to reach the boiling point. The vegetable should not entirely lose its crispness. If more convenient, the cabbage may be cooked in this way early in the day, set away to "ripen" or develop flavor for a few hours, and reheated quickly just before serving.

## Have Pickled Tripe for

Change on Family Table Beef tripe, or stomach lining, is a good food which may be preserved by pickling when beef cattle are killed on the farm. The United States Department of Agriculture gives the following directions for preparing it:

After the tripe has been thoroughly cleaned and rinsed in cold water, it tle below the boiling point). When of the stomachs may be removed by scraping, which will leave a clean, white surface. Tripe should be boiled until tender (usually about three hours) and then thoroughly chilled in cold water so that the fat may be scraped from the outside. When this has been done, peel off the membrane from the outside of the stomach and the clean, white tripe is ready for pickling. It is usually pickled in 45 grain vinegar.

The pickled tripe is prepared for use by washing and wiping it, and in order to get the best flavor and the after dipping convenient sized pieces in flour or egg and bread crumbs, fry-

To Distinguish Rayon

Artificial silk, or rayon, as it is generally called, can be distinguished from real silk because it is more lus trous than real silk, more stiff and lorsh, and burns like cotton with a yellow flame that flashes along and leaves a small amount of gray ash. An exception is a brand of Serve all lamb dishes piping hot on silk recently introduced which gives hot plates, suggests the United States | a hard ball of ash. "If the anticipations of the mining men here are fulfilled, there will be and fresh belts to be staked, in a zone ten miles wide and thirty long. At the northeast arm of the lake, which strike of Lorne Howie's lead.

"So far the sour dough has had his innings. A census of Red Lake's floatcupine staking, with the name of Alex Gillies, who discovered the Hollinger, at the head of the list. Gillies has last perhaps the most important of all, on the Howie claims. He is quite unSoil Resources Are Being Seriously Depleted by Gullying.

Enormous Annual

(Prepared by the United States Department of Agriculture.) Erosion of farm land causes an enormous annual loss to American farmers. While a large outlay of cash and labor is being made for soil improvement, at the same time the soil resources of the country are being seriously depleted through gullying. Owing to the large yearly rainfall and to the extensive growing of cleancultured crops year after year in the southern states, that section suffers a disproportionate share of this loss. Gullying does considerable damage, however, in nearly all parts of the United States,

When plants and soil are unable to retain all of the rain that falls on rolling or hilly land the surplus flows over the surface to a drainage channel at the foot of the slope. If there are no draws or depressions the water travels over the surface to the foot of the slope in broad, thin sheets. Where depressions exist, however, the water is led into the depressions. It gathers from above and from the sides of the depression and forms a stream with power to wash away the soil proportional to the stream's size and velocity. If the depression is not sufficiently protected by grass or other means to prevent erosion, a gully begins to form which enlarges with each succeeding rain.

Where Gullles Start. Natural hollows are not the only places where gullies start. They may start at any place on a stope where opportunity is afforded by artificial means for the water to collect and form a small stream. Driving a wagon down a slope when the ground is soft leaves wagon tracks that may later develop into gullies. A gully may be started by dragging a plow down a slope. Mole holes and cattle paths down a slope are common causes of gullies. One of the commonest ways to start guilles is to plow or cultivate straight up and down a slope. A dead furrow extending down a slope may rapidly develop into a deep gully.

Means employed to prevent the formation of guilles are: deep plowing, plowing under organic matter such as manure, stubble and stalks, the use of cover crops, proper crop rotations, plowing along level lines assuming and cautious in his statements, but does not conceal his faith across the slope, and tile draining ments, but does not conceal his faith The construction of terraces also rein this new came. Gasoline Is Source of Serious Danger

Keep Open Lights Out of Tractor Building.

Prepared by the United States Department of Agriculture.) Gasoline in uncovered receptacles, particularly when kept indoors, is a source of grave danger. Even at ordinary temperatures it gives off a very explosive yapor, the vapor from single plnt rendering the air in an ordinary sized room explosive. The vapor, being heavier than air, sinks to the ground or floor, and may be present without its odor being detected. For this reason it is especially bazardous to set a lantern on the ground or floor near a gasoline container of any kind, even out of doors, as the flame in the lantern may follow the vapor to the container.

Open-flame lights should never be allowed in the garage or building containing the farm tractor or gasoline engine. Automobiles are sometimes set on fire through ignition of gasoline or the vapor therefrom by sparks from cigars or eigarettes.

The use of gasoline inside the house for cleaning purposes has resulted in many destructive fires and numerous deaths. Often some cleaning agent that will not take fire can be used as satisfactorily as gasoline, Whenever gasoline is used indoors for cleaning, it is important that there he no fire in the room and that the doors and receptacle likely to break if dropped or struck accidentally.

very explosive vapors, and require the same precautions in handling as gas-

Two General Methods of

Keeping Paraffin Liquid There are two general methods of keeping paraffin liquid while painting the silo walls. The best method where it can be done is to keep the paraffin hot by means of a steam coll, using steam from a threshing engine. If the steam is under 100 to 120 pounds pressure in pipes surrounding the paraffin pail, it will easily keep the latter in a melted condition. In many cases this would be inconvenient for working in the silo. In such cases, the paraffin can be melted carefully over a slow fire, the paraffin pail set in a vessel of hot water, and taken to the work in that way. If the surface is Ing. dry and warm and one works rather fast, the paraffin can be put on fairly fast in this way.

The other way is to use about two callons of kerosene to each three rels, he hid the rest in the cellar pounds of paraffin, heating the kerosene with a hot water bath and shaving the paraffin into it. This does not make so heavy a coating as the paraffin alone and two coats will be necessary where one would do with the paruffin alone. One must be extremely careful with fire around either paraffin or kerosene, as they catch fire easily. Where possible, the water should be heated and the fire kept entirely away from the kerosene.

Fertilizer for Young

Orchards Must Be Rich Fertilizer, rich in nitrogen, is recom- seif he called Mrs. Sharpy and the mended for the young orchard. If the children-and in they all scampered. trees are beginning to bear it is a good Such a meet as they did have, and idea to omit most of the nitrogen and all the time Sharpy kept muttering. add more potash and phosphate. The quantity to be added will be deternined by the fertility of the soil.

If one is planting the orchard with by himself to get an inter-crop, the fertilizer should be the cherries, but added just after the first spring plowing. This will afford the fertilizer an opportunity to help the Inter-crop as well as the young trees.

Experiments prove that it is not a good practice to apply heavy applications of commercial fertilizers in the immediate vicinity of the roots. It is and to himself he far more desirable to broadcast the fertilizer among the rows. Good stable Sharpy had said: manure that is free from weed seed is always desirable. It may be applied any time with every assurance of success. Many practical orchard men apply it early in the spring and then disk it into the soil. Others simply put it on the ground and leave it there. From one to one and one-half tons to | again, the acre may be used with no danger from injuries. If one does not have enough fertilizer to go around when applied heavily, it should be spread and keep constantly on the lookout lightly. Better a half ton than none at all to the acre.

Protein Is Necessary

A certain amount of protein is absolutely essential in cattle feeding operations. Where alfalfa or clover hay is the sole roughage it is not necessary to use any protein food, but where affalfa or clover is fed in connection with other roughages, the addition of one pound of protein per head per day will reduce the cost of grains materially. If no alfalfa or other leguminous hay is fed, two pounds of protein food per head per day will produce considerable cheap

Weighing Milk Saves Feed Dairy cows should be fed in proportion to the amount of milk they produce. This can be accurately done by using the milk record sheet as a guide. In cases where a person starts to weigh the milk from his cows he not only saves food but he also increases the milk production because he places the grain where it is needed. states J. B. Fitch of the Kansas State Agricultural college dairy department, just nothing."-The Outlook.

# The Saar Basin Sunday School FLVL

Scene in the Saar Valley,

(Prepared by the National Geographic Society, Washington, D. C.) HE newest president to take office in Europe was not elected. He does not rule over a country,

a state, or even a mandate. The answer to the apparent riddle is that the Council of the League of Nations, which is trustee for 15 years for the Sarre (or Saar) basin, has appointed a new president of the governing commission, which is the government for the territory. This office of "President of the Sarre" has been called "the most difficult administrative position in Europe." The basin contains one of the most valuable coal deposits on the continent.

The Sarre basin is a sort of consolation prize with a string to it, awarded to France. When German troops redone that in 1919 the French could citles. whereas in 1913 the same mines had yleided 28,000,000 tons.

The diplomats who framed the peace treaty set themselves the task of compensating France as best they could for her ruined mines, and decided to porarily at least. The Sarre mines were the inevitable choice, for the territory in which they are located adjoined the new French frontier (formed by the restoration of Alsacecanala provided means for distribution of their output into France. It was decided that the mines should be French government for 15 years, from the mines for the loss of their prop-

The decision to give the mines to France ran into political and economic obstacles. The region could not be for some distance above Saarbrucken. left under German control because French property rights could not be bridge which spanned the stream in assured of protection; and the almost solidly German population and the ing being marked by the Alte Brucke German property could not fairly be (Old bridge), which is a product of placed under French control. The Sixteenth century engineering. League of Nations, therefore, set up a unique entity which is neither annexed a sort of twilight zone between France territory, an independent state, nor a and Germany for centuries. At times

Carved Out a Region.

A region was carved out, including not only all mines under operation, but also the entire coal fields. The greater part of the territory lies north and east of the Saar river but includes a narrow strip on the opposite bank. To the south lies Lorraine, to the north the German Rhine provinces. On the west the Sarre territory does not quite reach Luxemburg; a narrow strip of the Rhine provinces intervenes. The very roughly elliptical territory is gineer, Vauban, fortify it. The fortiabout forty-five miles in greatest length and thirty miles in greatest breadth, and has an area of something over 750 square miles.

Over this territory and its 700,000 inhabitants the league set a governing commission to consist of one Frenchman, one citizen of the local region, and three non-French and non-German members, the president to be appointed by the league council. The French member held the presidency for the first few years, but the office is now filled by the Canadian member. The commission is directly responsible to the league council and its acts are reviewed by that body. The region was included in the French customs system, and free trade was granted with Germany until January, 1925.

The status of the Sarre is described by international lawyers as a "suspended sovereignty"-that of Germany -while the League of Nations acts as learned that fewer than a hundred men grievous mistakes in receiving and trustee. Acting for the trustee is its were killed on both sides. Four days even seeking financial help from godagent, the governing commission, headed by its president. worked and Industrial towns, softening the picture of industry which in

other regions is often all too stark. In the valley outside the mining zone, wine making is the most important industry. Many of the vineyards are planted in the beds of former loops of the river, left when it carved out more direct courses. From these come some of the famous Moselle wines.

Moselle wines are older than the Rhine wines. Vines were planted along the Moselle less than three centuries after the birth of Christ, A Latin poet, Ansonius, sang their praises in "Mosella," wherein he also mentioned a royal villa whose remains are to be seen to this day at Conz.

ABRAHAM AND THE KINGS

LESSON TEXT-Genesis 14:1-24. GOLDEN TEXT—Genesis 14:1-24.
GOLDEN TEXT—In all these we are more than conquerors through Him that loved us.—Rom. 8:37.
PRIMARY TOPIC—Abraham Saves ot From Danger.
JUNIOR TOPIC—Abraham Rescues

INTERMEDIATE AND SENIOR TOP-C-Abraham's Courage and Generosity. YOUNG PEOPLE AND ADULT TOP-IC-Victory Through Faith and Cour-

I. Lot Taken Captive (14:1-12)

Lot's misfortune was due to his elfishness in choosing the best land regardless of the moral risks in his associations (13:10, 11). The Jordan valley was very fertile, but a place of noral snares because Sodom was there. Frequently fine pasture for cattle contains poisonous growths, Lot's trouble was not primarily because he was a bad man, but because of his associations. The steps taken by Lot as shown in chapter 13 were: 1. He lifted up his eyes and beheld

(v. 10) 2. He chose him all the plain (v. 11), 3. He dwelt in the cities of the plain

4. He pitched his tent toward Sodom (v. 12)

5, He dwelt in Sodom (14:12). 6. He sat in the gate of Sodom (19:1).

II. Abraham Rescues Lot (13-16). 1. News brought to Abraham (v. 13). Abraham was in a place of safety. Just why the man who had escaped came to Abraham with the news we do not know. Perhaps Lot had requested him to tell Abraham of his misfortune, making known the fact of his kinship and through him appealing for help.

2. Abraham in pursuit (vv. 14, 15). Abraham, the great-hearted, forgot Lot's selfishness and ingratitude, organized his servants and by a night attack defeated the enemy. Abraham might just have left Lot to his fate, but because Lot was his brother he forgot his wrongs

3. Lot rescued (v. 16). Not only was Lot saved, but the women and his goods were rescued. Because Abraham was separate from Sodom he was able to save his brother. The one who is separate from the world has power to overcome it, while the one who is joined to the world is

FARM FLOCK STILL ILLINOIS SIDE LINE

Although Illinois is one of the foremost states in value of poultry and poultry products, the business is still considered a side line on most farms of the state, according to John Vandervort, poultry extension specialist of the college of agriculture, University of Illinois. Poultry is kept to utilize waste grain and furnish eggs and poultry for the family. Some profit is realized from the average farm flock, but the income is distributed in small amounts throughout the year. The farmer, therefore, often does not ealize how profitable his flock is,

There is a great need for educalonal work to encourage farmers to dopt better management methods. To this end, the flock management is being stressed in the poultry extension work of the college. A definite project is being carried out for the three-fold purpose of: (1) encouraging better management methods for farm poultry flocks in Illinois, (2) encouraging the keeping of records as a basis for studying the efficiency of farm flock production, (3) developing leaders who will follow improved poultry practices, as far as practical, in order that their flocks may serve as demonstrations of profitable poultry management in their respective communities.

This flock management project is becoming more popular each year. Groups of co-operators in 40 counties started records at the beginning of 1925 and it is expected that similar records will be kept in nearly fifty counties in 1926. The record itself is of much value to the individual, but it is felt that more good will eventually be derived from the development of flock demonstration farms that will lemonstrate better management practices to farmers in communities near these farms.

Seventy farm poultry records were completed in 1924. The average size flock on their farms was 183 birds, adorned with those queenly gifts of the average egg production was 112 eggs and the average profit was \$1.24 something stood strong within your a bird. The best one-third of the farm heart in the hour of that crisis, and flocks showed an egg production of there is something that must stand while the poorer one-third of the life, as she holds in her hands that flocks showed a production of 96 eggs power which determines the future of and a loss of 21 cents a hen. These records bring out the fact that low egg production can be an important factor in causing low profit.

Better production can be brought about by the elimination of bens that have proven to be poor layers and pullets that do not give promise of speaks, and it is the mother who paying their board, careful breeding from birds selected for egg produchelpless and is carried away with its | tion and by careful feeding and management.

Poultry is not profitable on many by parasites and diseases. This problem is becoming more and more serlous throughout the state and a need means peace. The name is descriptive | felt. As a result, a poultry sanitastarted in a few counties this year in these counties and the animal pathology division of the college,

## Dust Wallows Essential

for Health of Chickens

A dust bath is as essential for the health of chickens as a water bath is for humans. By its use fowls are able to rid themselves of many lice, as well as to remove the scales and scurf from the skin.

Large, deep dust boxes are essential in the laying pens. They should be deep enough to hold about six inches of dusting material. They are usually placed in the corner of the pen, in the sunshine, and elevated so that the litter from the floor will not be thrown

The material used for dusting should be fine, light and dry. If it is to kill lice it must be fine enough to fill the breathing pores of these parasites. Sandy loam mixed with road dust makes a fairly good dusting material. Sifted coal ashes will help in making

If no provision has been made for securing dusting material before winter, it will usually be necessary to depend upon loam which can be dug up and dried and mixed with one-third sifted coal ashes.

## Lack of Proper Feed

If you own a flock of Rhode Island Reds or Barred Rocks that don't seem to be producing as many eggs as your neighbor's Wyandottes or Leghorns, don't make the mistake of wanting to raise the same breed as your neighbor. You probably are at fault in the care, feed and method of feeding. If given proper management your flock would probably be able to produce as well as your neighbor's. The average farm flock does not receive the feed needed for egg production.

## Time to Caponize

Great Personages of the Bible

REV. LEONARD A. BARRETT

Vashti

THE book of Esther introduces us to an environment intensely Persian in character. In the midst of all its gorgeous splendor, Ahasuerus, known as Xerxes the Great, ruled as In a magnificent palace garden

Abasuerus entertained his friends with marked and extravagant hospi tallty characteristic of the East. When the revelry had reached its height Ahasuerus commanded that Vashti be brought unveiled before the assembled guests. The rule of the East was that no woman was permitted to apear unveiled in a public place, and her consent to comply with the king's wishes would have at once involved her high sense of propriety and bonor Should she disobey, Vashti would be compelled to pay the price of her refusal. That night, facing a future dark and unknown, a regal conscience left that Persian palace, for the soul of Vashti had fought and onquered in the struggle for her ideal f what was right. Here was a character true to all that is implied in that noble word woman. Vashti was evry inch a woman, and rather than sacrifice her conscience she was willing to abandon wealth, a life of luxurious ease, and all the prerogatives which belonged to her as queen of the Persian palace,

In the veins of Vashti there must have flowed the inherited blood of a true aristocracy of character. How did Vashti become the recipient of such a high conception of woman bood? We know that she acquired it through no influence of the Persian palace. She brought to Ahasuerus a ligh conception of womanliness which was Instilled into her life in the far earlier years of her development Back of all the gifts which crowned Vashti queen, we can see the molding influence of a mother. Vashti had a mother. Rack of every woman womanhood, is a mother. Ah! Vashti 128 eggs and a profit of \$2.88 a hen strong in every woman's heart and American citizenship.

In the career of every child there come times of doubt and perplexity. when the music of the Ave Marie is a very real experience. Where shall a child go in such hours, save to a mother? It is the mother that stands up and answers the all-perplexing questions and solves the intricate problems in the life of her child. Before we can ever bring to the present social and economic problems a sure farms because of heavy losses caused and a permanent solving power, Amer-Ican motherhood must have absorbed early in its infancy those high and noble ideals, those commanding for work along these lines has been and all-illuminating motives, those exalted and queenly conceptions of charof his office, rather than a proper tion program has been outlined and acter, which we discover in the mother of Vashti. Let Christian motherfollowing features are suggested by co-operation with the farm advisers of hood rise to this proclamation, that ed States should participate. This did on that voyage with the poison of an- trict of Columbia. cestral blood flowing in his veins.

Many solutions are offered for the evlis of our age. To the task of solving eur social and economic problems, every person should contribute his share of service and money, but even then have we solved the problem? There is a cause for crime more far reaching in its influence than poverty and the social conditions, out of which much evil arises. The cause for crime barks back to the problem of heredity, which argues again-ev ery child has the right to be born It harks back to the earlier days when into the development of child life there must be infused those ideals and motives for which true American motherhood stands. This idea is magnificently expressed in a Mother's day proclamation recently handed down to the people of Michigan by the gov ernor of the state. "Never did the word mother have a broader and deeper meaning than it has today. The welfare of the world is related to motherhood. Would that the moth ers of our sons and daughters fully realized the power they wield Through the double standard of virtue established by man long ages ago mothers have unconsciously granted their son's license to disregard the sanctity of womanhood. When mothers shall insist upon as clean men for husbands of their daughters as they now insist upon clean daughters for wives of their sons a new era will have dawned in which the social evil and the white-slave truffic will have largely disappeared from our fair land. The highest type of woman is the mother. The word mother thrills the heart with joy and gratitude and gives to memory priceless treasures."

Ahasuerus' feast is a thing of the past, but the queenly spirit of Vashti who sacrificed position rather than conscience, who remained true to her her child) the challenge as well as the

## A car for every purse and purpose

IN THE automobile industry several distinct price classes have developed. General Motors is represented in each.

The General Motors line of passenger cars comprises 52 different models. They include every open and closed body type and range in price-at-thefactory as follows:

> CHEVROLET 6 Models-\$510 to \$765

> > PONTIAC 2 Models-\$825

OLDSMOBILE 9 Models-\$875 to \$1115

OAKLAND 6 Models-\$975 to \$1295

BUICK 16 Models-\$1125 to \$1995

CADILLAC 13 Models-\$2995 to \$4485

Quality is the first law of General Motors; and sweeping economies, possible to an institution with the resources of General Motors, are reflected in the prices of General Motors cars.

Select the car that suits you from the General Motors line. You may buy it out of income on General Motors' time payment plan (GMAC), which assures fair terms and low rates.

Wave Trap Will Cut Out Loud Locals-The Conductively Couple Form and the Inductively Coupled.

paratus capable of cutting out strongmore and more. There is not much fun in sitting through the program of one particular station night after night, especially when a better program is being offered by some other station which is drowned out by the nearer or more powerful transmitter. "Interfering signals," writes Howard E. Rhodes in the Radio Broadcast magazine, "sometimes are caused by driect pickup by the colls of the set so that its natural selectivity is of no avail in eliminating them. This occurs when the set is being operated in proximity to a broadcasting station, with the result that the field strength In the vicinity is great enough to induce currents directly in the various colls of the receiver. Under these conditions it will be found possible to hear the program with the antenna disconnected.

"The only practical methods to be used in eliminating this type of interference are either shielding of the rereiver or using some form of closedfield coil, such as a toroid. If the set is to be shielded, it is necessary to line the entire inside of the cabinet, including the cover and the panel, with thin copper. Any joints in the copper sheet are soldered together and connection is finally made between the shield and the minus A terminal which, in this instance, is connected to ground. This puts the entire shield at ground potential, thereby excluding from the colls any external electrical fields. It should also be pointed out that this shielding will also eliminate any interference caused by power lines, motors, etc., provided they are causing trouble by setting up currents directly in the coils. However, if the Interference is reaching the set by way of the antenna system, shielding will be no aid. The use of torold coils is coming into very common use in instances where there is need of an inductor that is unaffected by external

## Why Torold Coll Is Favored.

The gist of Mr. Rhodes' explanation why the torold type of coll is recommended for use where ordinary coils will cause broad tuning by their pickup qualities, is as follows: Toroid coils will, as is the case with other coils, have induced in their turns currents which ordinarily would nullify the selective qualities of a receiver. However, the voltages induced in opposite haives of the coll, oppose each other, and the resultant effective pickup voltage is zero. This nullifying feature is apparent in several other types of colls, but is probably more so in the toroid. The article in Radio Broadcast continues as follows:

"There is a second type of interfering signal that causes considerable trouble, and against this type the two cures so far described are useless. If the signals being induced in the antenna are sufficiently strong, it is possible that a receiver may not have a selectivity sharp enough to eliminate them completely, although its selectivity under ordinary conditions may be perfectly satisfactory. For instance, the receiver might be operated at a location quite close to a powerful broadcasting station so that the signal strength from this station in comparison with the strength of the signals that it is desired to receive from other stations is so great as to produce considerable interference, even though the receiver is considerably detuned from the interfering signal. It is apparent tery and a milliammeter. The reading then, that, in some way, this powerful signal must be impeded so as to de- ter. crease its strength. The most common piece of apparatus for use in this connection is the so-called wave trap which is actually a filter circuit tuned to absorb the interfering signals. These wave traps are very easily constructed, and cost little. They consist merely of an ordinary coll and a condenser. The traps are connected in the antenna circuit and are adjusted so that, at the frequency of the Interfering signal, they have a very high impedance, the exact value depending on whether the unit is connected in series or parallel with the antenna. drink of distilled water occasionally.

Due to the widespread increase in | This high impedance prevents the sigpower of many of our broadcasting nal from passing down through the stations, the need for some sort of ap- primary of the antenna coupling and so into the receiver. At the same ly interfering stations, is becoming felt | time, these wave traps offer a very low impedance to all other frequencies.

### Methods of Operation.

"There are several methods by which these traps might be operated. Fig. 1 shows the most common method. In the drawing L, C, constitutes the trap circuit and L, C, the antenna coupler and tuning condenser of the receiving set. It will be seen that the trap is connected between the antenna post of the receiver and the antenna lead-in. Fig. 2 represents a slightly different method of connecting the trap in the circuit. In this latter method, the wave trap is inductively coupled to the antenna. This inductive coupling is obtained by winding a few turns of wire about one end of the coll Lq. One end of this new winding connects to the antenna and the other to the antenna post of the receiver. This circuit is practically equivalent to that of Fig. 1 with the difference that somewhat sharper tuning is obtained.

"Whether the trap circuit of Fig. 1 or that of Fig. 2 is used, depends to a considerable extent upon the characteristics of the antenna system. A well insulated antenna with a short lead-in and a short ground wire to a good ground, such as the cold-water mains, gives best results with the inductively coupled circuit. Every effort should be made to have as good a ground and antenna as is possible, but lead to a rather poor ground system, the direct coupled wave trap will probably give better results.

direct coupling, as illustrated in Fig. fore you came." some small change in the tuning of the antenna condenser will be noticed, directed the butler to bring him into whereas with inductive coupling practically no change in tuning takes place. came, and behold he was the man who This represents a slight advantage in had yelled to me as I furiously galfavor of inductive coupling since it loped up the plantation road in search will be possible to continue to use the of a wife. What was more astonishhas been installed.

"If the trap is poorly made," says Mr. Rhodes in conclusion, "It may not Mrs. Brampton, and with much only eliminate the interfering signals squirming and twisting, he told me but will also decrease the strength of how he had brought her a message those signals we desire to receive. The from Biloxi, it being written by no most common cause of poor results one less than his excellency, Sleur with wave traps is due to the use of de Bienville. high resistance colls and low-grade condensers. ## CHAPTER XIV-Continued

-18-She had difficulty in adjusting some twigs of the hedge to her liking, and her voice was so low I could scarcely hear it as she said:

"I told you once that should you feel the same as you did that time on the river-that second time on the second river-there could be no harm- Ah, I put shame on myself to speak more.'

"And I repeat I am a very foolish man and must have love where I love," I stammered.

"Such a hard man!" she sighed, with a quick uplift of her eyes; and I could swear she was laughing at me.

"You broght me here to have me propose marriage to you?" I bluntly demanded. "It is shameful to make me say

that. But it is true," she mumbled. Even then I feared she was sacrificing herself to me because of some absurd sense of gratitude.

"But your pride-" "Enough of that word!" she flercely cried, clutching both my hands and turning eyes filled with tears for my inspection. Then humbly:

"Does monsieur find pride in me now? Or does he find a poor, homeless, homesick girl with no friends. no people?" My arms would have closed about

her slim form had she not had a secend thought. Withdrawing from me and holding her head high and haughty she accused me;

"You dared to think wrong of me on that island off Biloxi! You dared to think weakness of me because I came on that terrible ship! Not a word, monsieur! I will listen to no defense!"

As poor Joe Labrador would have said, "Ah, that Mademoiselle Dahlsgaarde!" In her moods she was as irresponsible as a butterfly, and as irresistible as a sunbeam. I lled bravely and sternly, and severely lectured her for presuming to read my thoughts and then to convict me on whatever conclusions she might happen to form. The rigidity of her pose gradually relaxed while I talked. By the time I had finished a discourse on the evilness of "pride" she was quite limp. And when for the third time I asked her to marry me she did not refuse.

Our wedding was two weeks old and was still as ardent a believer in fairytales as any Frenchman. Then my host demanded my attention, and informed me that the man who was so If it is necessary to use a long ground Insistent on seeing Mrs. Brampton was again calling.

"I believe the fellow must be crazy, William, but it's for you to dispose "When using the latter method of of him. He bothered her some be-

1 sternly inquired his business with

"And, monsieur, I have waited six weeks, and she will give me no unduce madame to write just a word? I sent a boy to fetch Mrs. Bramp adjacent to that wave on which the ton. As she entered the garden and interfering station is operating. Most beheld Matter she smiled slightly, but

> her face, "Madame, this man, Jules Matter, says he brought you a message from Sieur de Bienville and fears he will be punished if he returns without an

> "So?" she softly answered, "Then he should have an answer. And has monsleur, my husband, been told what the message contained?"

"I doubt if the messenger knows. I certainly have not asked him."

1 turned aside and became interested in a rosebush. With a swish of skirts she was at my side and explaining:

"They found out directly after I called. Word came by the very boni which followed the Maire, the very oost Bienville went out to the Island to meet that night you escaped from Blloxi. Think of it! That very night Bien dile had his orders from my uncle, the marquis, and if you had been a day late they would have undled me back to France and you would have no little wife to make you happy this day,"

I gaped at her stupidly and mut

tered: 'The trall is very blind, madame t find a sign here and there,"

"Foolish one! I knew it would ome in time. That was why I was education has been of the highest-are tetermined to marry you before you | searned the truth"

"Aye? Well, you did it."

"Because I feared that once you learned the truth your silly English pride would send you back to the terrible forest and that abominable river, and I would return to France, or stay here unwed. Here is the message. Rend it."

She pulled a paper from the bosom of her gown, but I refused it, suggesting that she tell me what she would. She settled herself primly on a rustic settee and made an imperious little gesture for me to be scated.

"It is like this, my love. My mother was a de Baude, a distant kinswoman of Comte de Frontenac-"

"Pride!" I exclaimed, beginning to inderstand.

"Her family would have none of her because she married a Dahlagaarde. After both she and my father died an uncle was named as my guardian. He is a friend of Monsleur le Regent, and being a marquis and having great wealth, he is a very and dog. His tastes and Monsleur le Regent's are the same. The two plan to marry me to an execrable creature. who has much gold, a great family

You Brought Me Here to Have Me Propose Marriage to You?" I Bluntly

name, and the morals of the devil. I lines follow. I am fresh from the convent. I know little of the world. marquis, says it is the regent's will bring the man to me.

from my husband. It seems his orders are to place me on the first ship returning to France. He is much concerned to have me go back. Monsleur le Regent is vastly interested; and that means Monseigneur L'as will do anything to get me back," "D-n them all! All France can't

get you back!" I cried. "O-o-o!" and she drew back in a pantomime of fear. "Such terrible words my husband speaks! But his excellency writes most polite. He the same as says I shall dictate my own future. A ship will take me from Charles Town, or Pensacola, as I wish, It is arranged with the English government that I may go in an English ship, if I wish, I am warned not to return by way of the river, as it would be too dangerous. You should feel very proud to find me a woman of so much importance. Now you know all. Will you keep me?"

"Against ail Europe!" I told the top of her head.

She struggled free and cried: "But you never ask about the old pirate. Such a polite husband! I know you die of curlosity. He was an

undergardener at my uncle's country place. He saw me steal away from ome, and he followed me. He was a very wicked old man. He followed me on board the ship, planning to make a fortune out of my disappearance. He knew there would be a great search and a big sum in gold offered. He would wait in the new world till he could drive the best bargain; then he would betray me. He

It was all told. I felt humble and meek, but took care it should not show. So I urged her to get rid of Matter by sending an answer to Bien-

was very wicked."

"Ma fol! As your wife I think it would be better for Mr. Brampton to write the answer," she replied. "Else why did I keep this poor man waiting until you came here and married me?"

We've traveled far together since those old brave days, and many of refuse to marry the beast. Terrible the myths have been killed out of the valley. A miracle she never wearies of contemplating is our twin boys. I am terrified when my uncle, the called them English and she flared up and declared them to be French, and that I marry his choice at once. They before I could join the issue she was in tears, and saving they were neither "He is hideous, and old enough to French nor English, but were Ameri e my father. I swear I will not wed cans. And so she brought them up to My uncle the marquis, says I consider themselves. A second miracle shall. I am nearly insane. But there she could scarcely comprehend was are wonderful stories being told about their astounding growth until they the Mississippi country. Every one is were my equal in stature. And her making a mountain of gold just by pride! It towered above all other buying John L'as' stock. IT PAYS TO ADVERTISE

by ARTHUR D.

HOWDEN SMITH

COPYRIGHT by ARTHUR D. HOWDEN SMITH

OLD, Jewels, Fights, Buckets of ---, well, it's a

pirate story and undoubtedly the best one that

has come out since Robert Louis Stevenson's "Treas-

ure Island." And the odd fact is that it is founded on

that masterpiece of adventure; for Arthur D. Howden

Smith, the amazingly clever producer of thrilling

romances in his eager moments and of costume novels

in his quieter moods, hit upon the unique idea of

taking some of Stevenson's characters at periods in

their career before "R. L. S." became acquainted

with them and of plotting the stirring events that led

to the placing of the treasure on the island. The con-

sensus of critical opinion is that "Porto Bello Gold"

**BEGINNING MAY 14TH**

# If It's Merely A Matter Of Price

IF IT'S MERELY A MATTER OF PRICE Most retailers want to sell pants at prices that represent big value. Many of them think they are obligated to sacrifice tailoring and be satisfied to sell a cheaper make.

That isn't the case at all.

Our odd trousers are tailored as well as any suit or coat in our store.

But we sell them in a good grade of tailoring at prices that are practically no higher than you are accustomed to paying for a cheaper

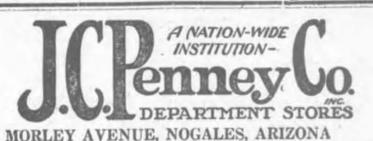

If you are not acquainted with our trousers, we would like to show you our Summer Clothing and Sports Suits.
