SHOW MORE INTEREST IN SILVER

The royal commission on Indian currency and finance is seeking a method to stabilize the medium of exchange in India, to have it in sufficient volume to meet the needs of commerce, and to have her people have full faith and confidence in its continuing stability.

Commenting on this problem, the Mining Congress Journal points out that the desire of the commission will receive general approval, but that if its recommendation to accomplish the result is carried out it will be disastrous to the people of India and greatly disturb world finances.

Apparently the commission would put India on a gold basis with paper currency as a medium of exchange. From time immemorial the people of India have had full confidence in the value of silver. It is a question whether they could ever be educated to have confidence in paper money based on an invisible gold reserve.

India is said to have ample silver to meet present needs for currency, if only part of the hoarded wealth could be placed in circulation as a medium of exchange. The Mining Congress Journal points out that if, in changing to a gold basis, the greater part of the Indian government's stock of silver is thrown upon the world market, and if, at the same time, the one-third of the world's production of silver heretofore absorbed by India is also thrown back upon the world's silver market, this silver market will be utterly destroyed.

As silver producers of the western hemisphere produce 70 per cent of the world's silver, it can be readily seen that the United States is deeply interested in any change in the medium of exchange proposed in India.

During the World War our nation, by a special act of congress, provided for the melting down of several hundred million silver dollars, to be replaced later, in order that India might have silver, its great medium of exchange. The United States government should take an interest in the solution of this problem, help India get on to a sound money basis, and at the same time prevent destruction of one of our great basic industries—silver mining.

ENDURING MONUMENTS

In no other country in the world can one see such striking monuments to the life work, initiative, enterprise and courage of individual citizens as are seen in every part of the United States. The peculiar part is that one passes by these monuments on lonely roads and in the most crowded cities without realizing it.

William J. Baldwin of Birmingham calls attention to such a monument down in Alabama. It is a two-room cottage built of rough boards. In it lives a young farmer and his wife. Mr. Baldwin says this cottage "is typical of the abodes of many young farmers of today who are holding the world together by digging out of the soil food and raiment, the very foundation of our earthly existence."

But where is the monument? It is the cabin itself, sheltering a happy family, relieved of much farm drudgery by the electric wire which reaches them and does much of the farm work, including cooking, washing, ironing and farm chores to which it is applicable.

Thomas W. Martin, the man who put this wire to outlying Alabama farms, is like other public utility executives in all sections of the United States. He has built a monument which will be more enduring than a shaft of granite, because his act has brought progress and development to a state which will endure for all time. Such monuments of human happiness and work made lighter may not be reproduced by sculptors or recorded in the Hall of Fame, but as Mr. Baldwin points out, the benefits of such service will linger longer than a face chiseled in marble.

UNION HIGH SCHOOL TEACHERS ALL MEMBERS OF N. E. A.

From the national secretary of the National Education Association in Washington, D. C., comes the following, which speaks well for our local staff of high school teachers:

"One hundred per cent of the teachers of the Union High school, Patagonia, Ariz., are enrolled in the National Education Association. This is commented on by J. W. Crabtree, the secretary in the following language:

"We are proud of your 100 per cent enrollment. You and your associates are to be congratulated on this high professional spirit. The certificate granted by the executive committee shows, by a gold seal called an honor medal, the first year of your 100 per cent enrollment. This certificate will be sent you soon."

"The National Education Association was organized in 1857. Through its efforts the United States bureau of education was established. It has more than 160,000 members. It is the largest professional teachers' association in the world and the greatest publisher of literature on education. Among the planks in its platform of service are: (1) A competent teacher in every public school position in the United States; (2) Such inducements to enter the profession as will attract the most talented men and women; (3) The establishment of a department of education with a secretary in the president's cabinet; and (4) Ratification of the constitutional amendment authorizing congress to regulate child labor."

PETROLEUM AND PETTICOATS

A prominent oil man, in discussing the future of the petroleum industry, says:

"No matter how earnestly we may desire, we cannot recover and utilize a greater supply of petroleum than exists.

"The miser hoarding his gold may fall upon the day when it will have lost its value.

"Tomorrow may not need our petroleum. And if it does it may discover that it has more than it needs. Our duty, in the light of our present knowledge and understanding, is to use it with reason and moderation, to apply the most effective methods of recovering, refinement and utilization, and to avoid parsimony that by paralyzing effort and preventing progress, might easily produce disastrous consequences.

"A few years ago cotton was woven into cotton fabrics. Then fashion insisted on silks—and so today cotton and wool pulp are combined and woven into the superior product of rayon, or artificial silk.

"Likewise, a little while ago, the most important petroleum product was kerosene. Precisely as new fashions enabled the women to get more dresses per bale of cotton, so new mechanical methods have enabled the motor cars to get more miles per gallon of gas. Styles have changed, that's all, in motors and petticoats. But can anybody imagine law and regulation bringing such revolutions into the textile and petroleum industries? Nothing on earth except the untrammelled working of waste, inventiveness, ingenuity and free economic forces could have made these things possible."

A GREAT PAYROLL INDUSTRY

How much scientific metallurgy is responsible for improved conditions in mining is shown by the records of a few big western mines. Utah Copper used to recover 60 per cent of the copper in its 1.3 per cent ore, handling 24,000 tons a day. Now it recovers 90 per cent from poorer ore, handling 40,000 tons daily. The Sullivan mine at Kimberly, B. C., sold a few years ago for \$250,000, had complex ores that, though rich, defied the chemists. A long series of experiments followed, until a flotation process has brought them an 80 per cent saving of zinc and 90 per cent of lead, and net profits of \$15,000,000, with 100 years' supply of ore yet in sight.

Mining pays almost as large a proportion of its money for wages as farming. It is one of the few industries that in many cases has a wage scale based on profits; a scale that provides for wage advances based on the sale price of metal in addition to a liberal base pay.

Mining is a cash market for labor, for the farm, for the manufacturer everywhere. It is entitled to the fairest laws possible, and the encouragement of everyone who can give it a boost.

LIVING BEYOND THEIR MEANS

It has become a notorious and well-established fact that while the federal government has reduced taxes and been living within its budget the average local and state government lives far beyond its means.

Department of commerce figures show state governments spending money faster than they collect it, and out of the 48 states only 17 kept within their budgets in 1925.

Business Poor? Try Advertising

State Business Conditions For October

Business conditions in Arizona were little changed in October, the average level being above September and somewhat ahead of last year. Although the unsatisfactory cotton market is an adverse influence in the agricultural sections, the outlook for winter is generally good, with the mining industry active, the livestock industry showing some further improvement, much new development and construction under way, and indications of an excellent winter tourist season.

The state's cotton crop is now estimated at 112,000 bales, against previous forecasts of 105,000 and total production of 119,000 last year. Ginnings to November 1 were 50,600. Demand for alfalfa has improved materially, and what should prove a record winter lettuce movement will start the end of this month.

Fall cattle movement is going along well, with practically all steers available contracted. Prices show some improvement over last year. Lamb prices have advanced in recent weeks and the wool market has been firm. Sheep are on their way to southern feed grounds in excellent condition, and the outlook for winter feed on cattle ranges is improved from a month ago.

The principal new development in mining was announcement that the Phelps Dodge Corporation will build a lead smelting and refining plant, the first in Arizona, at Douglas, and a lead-zinc concentrator at Bisbee. Development and construction work remained active throughout the state.

The month contained several features of importance in the big construction program that has been under way here in the last few years. Chief among them were the completion of the Southern Pacific's \$16,000,000 new main line through the Florence-Casa Grande, Salt River and Lower Gila valleys, and the calling of bids for construction of the Coolidge dam of the \$5,500,000 San Carlos project to irrigate 100,000 acres in the Florence-Casa Grande valley. Bids to close November 10. Contract for a power line from Hayden to the dam site, in connection with the project, has already been let.

Other developments in this field included voting of a \$3,000,000 bond issue to irrigate 40,000 acres in the Roosevelt irrigation district west of Phoenix and announcement by the Santa Fe that it will build a \$1,000,000 extension through the Beardsley-Agua Fria district of 39,000 acres that will be irrigated by the Fort Tanks (Lake Pleasant) dam now under construction. The \$5,000,000 leaching plant of the Inspiration Consolidated Copper Company is in operation, and completion of the \$1,000,000 Horse Mesa power dam of the Salt River Valley Water Users' Association is expected next spring.

Checking transactions in principal cities of the state as reported to the Arizona Industrial Congress, were generally above September figures, and compared well with those for October of 1925.

Agriculture

Prospects of a larger cotton crop than previously estimated, more active movement of alfalfa and favorable progress of the large winter lettuce crop have been the main developments of the advancing agricultural season.

Cotton ginnings in the state to November 1 totalled 50,600 running bales, and the government forecast of that date indicated a final production of 112,000 bales, as compared with earlier estimates of 105,000. At the same time the United States crop was forecast at 17,918,000 bales, against the October 18 estimate of 17,454,000. Although no improvement

in market conditions is in sight the increased yields will be of some benefit. Picking is going ahead with no unusual shortage of labor, and cotton is selling freely.

The lettuce crop is coming along well, and shipments from the Salt River Valley will begin the latter part of November. Acreage there is estimated at more than 8000, while 3300 acres are now reported in the Yuma section. On this basis winter lettuce shipments from the state should break all records. Several hundred cars of winter vegetables also will move.

Alfalfa shipments have increased materially during the past month, demand showing a decided improvement. Grapefruit movement is well under way and orange movement is starting. Grain sorghums are being harvested. Weather has been favorable for wheat seeding, and acreage planted probably will be much larger than last season.

Livestock

Fall cattle movement is under way under generally favorable conditions. Practically all steers available for fall delivery are now reported contracted, buyers having been active during the past month, and the demand for calves has been exceptional. Range cattle prices have been above last fall, while the fat cattle market has been steady at about the same level as for several months.

Range conditions have shown improvement under favorable weather, and the outlook for winter feed is satisfactory in all but a few sections. The lessened number of cattle on ranges is another factor in assuring ample feed supplies.

The situation in the sheep industry also shows some improvement over a year ago. Though range conditions were slightly better last season, there was ample feed to maintain flocks until movement to southern wintering grounds started the latter part of the month. The last few weeks witnessed rising prices for lambs, and growers who held off contracting until late realized prices equal to those of last year. Home demand for old ewes and feeder lambs exceeded the supply.

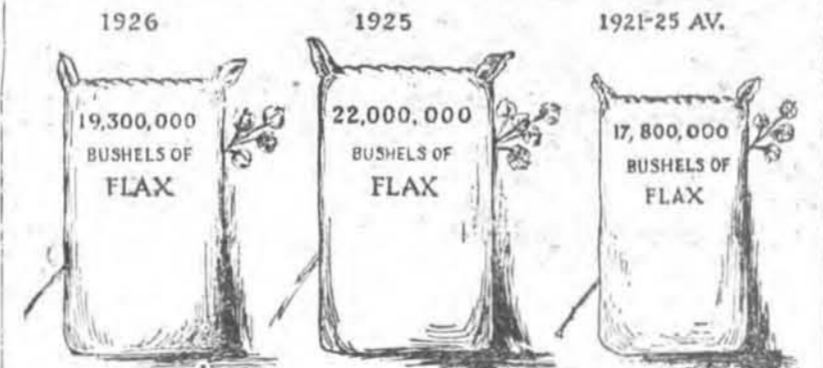

The wool market continued firm throughout the month, without any particular rise. Arizona wool is worth from \$1 to \$1.10 per clean pound in Boston. World markets are considered on a substantial footing and no serious fluctuations are expected, either up or down.

Mining

The most important development of the month in mining was the announcement that the Phelps Dodge Corporation will build a lead smelter at Douglas and a lead-zinc concentrator at Bisbee. The smelter will be the first in the state, and with the concentrator will lend considerable impetus to mining operations not only in Arizona but in Sonora, as the nearest lead smelter at present is located in El Paso, and many lead-zinc properties have been inactive on account of lack of facilities to handle complex ores. Plans are now being drawn, and it is expected the new lead smelting and refining plant will be finished by May. It will occupy a part of the corporation's present copper reduction plant at Douglas which will be abandoned following the completion early next year of the reverberatory plant being built in the company's new \$1,250,000 smelter construction project at Douglas.

New development continued active during the month, including a completion or starting of small milling plants at a number of properties. Activity also extended to non-metallic fields, the International Asbestos Company finishing a mill in the Sierra Anchas. New construction an-

Building Aids Flax Industry

THE continued building boom, in requiring more paint, has helped the flax industry of the country, according to the Sears-Roebuck Agricultural Foundation. Linseed oil is the chief ingredient of paints, and this oil comes from flax, which has become an important crop in many of the Western states, the Foundation points out. According to the latest official estimates, around 19,300,000 bushels of flax will be produced by American farmers this year. The crop was cut short because of midsummer drought in the chief flax-growing sections.

What the World Is Doing

Lever on Auto Pedals Help Cripple Drive Car

By means of hand levers attached to the pedals of his automobile, a cripple deprived of the use of his

legs, is able to drive with little difficulty. In applying for an operator's license, he demonstrated to traffic officials the efficiency of his equipment.

Present Bobbed-Hair Fad Many Centuries Old

Bobbed hair has joined the list of things that are not new, as a result of research by a French doctor who has listed three previous epidemics of feminine bobbing since the French revolution. The first followed immediately after the overthrow of the king, when women cut their locks in memory of Marie Antoinette, and others, who were shown before being led to the guillotine. The fad revived in 1836, when the princess of Orleans exhibited her painting of Joan of Arc, showing the famous saint, as she is always pictured, with a bob. It was known as the Joan of Arc style. Short hair, resurrected again in 1871, was then called the Ninon style, in honor of the famous seventeenth-century beauty.

Monkeys Captured with Rum

An easy way to capture monkeys has been discovered by African bushmen. They place a bottle of

native liquor under a tree where the monkeys play. The animals, attracted by the odor, drink and become intoxicated, then fall asleep. They awake in cages. Twenty-nine taken in this way were recently brought to this country by George M. Bistany of the Bronx zoo. He declared that they dance, play and sometimes fight when under the influence of the drink.

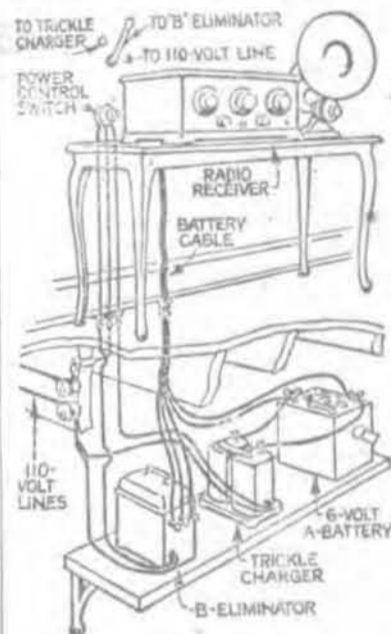

Color of Diamonds Altered by Exposure to Radium

Yellow diamonds, comparatively cheap and plentiful, can be changed into valuable blue-white stones through exposure to radium, a New York investigator has discovered, according to reports. His tests have been conducted for four years and in that time, none of the altered gems has reverted to its original hue, but there is no way of telling definitely whether the change will be permanent. About \$300 worth of the substance was required to change one diamond in four days. The scientist admits that the process is yet too costly to be commercially practical and is somewhat dangerous to the workers.

Simple Power-Control Switch

A simple power control for trickle chargers and B-eliminators may be obtained by means of a switch mounted on the wall, or at some other convenient place near the set. Power-control devices are now on the market, but for those who prefer to make their own, this simple switching device will give good service. The equipment consists of a three-point switch, of either the snap or push-button type, and the illustration shows the connections clearly. The switch lever and contact points merely illustrate the action of this snap switch and are not a part of the hookup. If the house has a cellar, it is always desirable

to place the batteries, charger and eliminator there. When tapping the 110-volt line, one side is connected directly to the trickle charger, and to the B-eliminator; the other side of the line goes to the post on the bridged contacts of the control switch. The remaining two posts on the switch are connected, one to the other input wire on the trickle charger, and the second to the wire on the B-eliminator. With a snap-switch the eliminator and charger will alternate on or off with each snap of the switch. If the flush-push-button type of switch is used, pressing one button will shut off the charger and connect the eliminator, in which position the set can be operated. Pressing the other button will shut off the eliminator and connect the charger. It will be seen that the filaments of the tubes must be operated independently by the filament switch on the set, or by turning the rheostats to the off position, if the set is not equipped with a switch.

Mrs. M. A. McMichael, of Poplarville, Miss., with a shotgun brought down a chicken hawk measuring four feet from tip to tip.

Henry Walsam, 90, of London has returned a marriage license he got in June, reporting that his bride-to-be, 37, had changed her mind.

(Sears-Roebuck Agricultural Foundation)

Approximately 50,000,000 bushels of barley will be fed to farm animals in the United States this year if the present crop outlook is fulfilled. Of this amount a trifle over one-half, or 50.9%, according to the figures compiled by the Sears-Roebuck Agricultural Foundation, is consumed by hogs. Next to them, horses eat the most barley, or 17.7% of all barley fed to farm animals. Then 11.9% is fed to cattle, mostly to dairy cows in the form of barley chop. Farm poultry flocks get away with another 10.5%, leaving 9% to be fed to sheep and used for miscellaneous feed purposes. Barley is the chief competitor of corn as live-stock feed and is especially important in the northern corn-belt and Pacific coast states, according to the Foundation's experts.

CULLED FROM THE NEWS

Andrew Owen of London was arrested and fined because his coat-tail covered the license plate of his motorcycle.

More than 1000 residents of Ryton, Eng., were driven from their homes in the middle of the night by dense masses of fleas, which disappeared the next day.

Alan Matthews of Derby, Eng., filed a bankruptcy statement saying that his employes ate so much of his candy that he could make no profits.

Police Constable J. E. Nichols of London, who is 6 feet 8 inches tall, is claimed to be the tallest policeman in the world.

Andrew Foulkes of Tottenham, Eng., took his dog to jail with him when he was unable to pay a fine for not having his name on the dog's collar.

Mrs. Martha Fenner of Waterbury, Eng., rescued three men from drowning in the River Medway.

**ILL. MAN INVENTS NEW FORD
GAS SAVER AND QUICK STARTER**
Walter Critchlow, 4402-P street, Wheaton, Ill., has patented a new gas saver and quick starter that beats anything ever gotten out. With it on, Fords show as high as 66 miles on one gallon. Other makes do equally well. This new invention saves gas and oil, makes a Ford start instantly in any weather and completely de-carbonizes the engine. Mr. Critchlow offers one free to advertise. Write him for one. He also wants County and State Distributors who can make \$500 to \$2500 monthly.—Adv. 12-19

Gasoline Runs Oats Out of Gas

GASOLINE has oats on the run as a source of power on the farm, according to the Sears-Roebuck Agricultural Foundation. The increase in tractor farming and the decline in farm horses of 3,624,000 head from 1920 to 1925 has greatly reduced the demand for oats. The crop this year will be only 1,264,000,000 bushels, according to the latest official estimates, the Foundation states. Last year the crop totaled 1,512,000,000 bushels, while the five-year average is only 1,327,000,000 bushels. About 45,045,000 acres were devoted to oats this year, and it is expected that the yield will be around 27.5 bushels per acre. Like corn, most of the oats is consumed by live stock. Very little of it is sold and not more than 2 per cent of the crop is exported, as a rule. Since the demand as a horse feed has declined, a larger percentage is being consumed by hogs and cattle. The carry-over from the 1925 crop was large because of the bumper crop last year and due to the general scarcity of live stock, so in spite of the short crop this year, there will be ample to meet the demand.

**MEDICAL LIQUOR PLAN OF
ANDREWS APPROVED**

Washington, Nov. 22.—Immediate steps must be taken to replenish the medicinal liquor stock, Secretary Mellon warned today. He also advocated that it might be manufactured in this country under the plan outlined by Assistant Secretary Andrews, dry chief.

Taking issue with the view of W. B. Wheeler, general counsel of the Anti-Saloon League, that there was no necessity for worry over the medicinal supply for several years, Mellon emphasized that it would require five years to age properly a new supply. He estimated there was no more than a five-year supply on hand.

Likewise, Mellon has no sympathy for the proposals to import whiskey from abroad to meet domestic requirements. He believes it will be easier to assure a pure supply of liquor and to prevent diversions if the whiskey is manufactured here rather than imported.

SOCIETY MAN INCOMPETENT

New York.—William Martin French, New York and Paris society man, was found incompetent and unable to manage his own affairs "by reason of habitual drunkenness" by a sheriff's jury. French was arrested November 10 on the French liner Paris, charged with cashing a worthless check for \$3500 at Nice, France, and taken to The Tombs.

Many Foreigners in Mexico
Mexico City.—There are now 34,659 foreigners in Mexico City according to figures computed by the municipal government from the registration of foreigners here. This does not include those living in the suburbs. A registry has been established here where foreigners arriving are required only to show their identification cards.

YEAR-ROUND RABBIT

Domestic rabbits deserve to be better known as an article of food, says the United States department of agriculture. The meat is very delicious, tasting more like chicken than that of wild rabbits, although these are good, too, in their season. Domestic rabbits have no special season, but may be eaten the year around, whenever those who raise them put them on the market. Domestic rabbits are raised in hutches where they have only limited exercise and where they can be properly fed. They are cleanly in habits, and their diet, consisting chiefly of oats, barley, and alfalfa hay, makes the meat sweet, tender, and excellently flavored. Housekeepers will do well to acquaint themselves with the domestic rabbit as an addition to their tables. The game flavor of the wild rabbits is liked by many persons, but to others it is not so acceptable, and consequently the domestic rabbit is scarcely known by these people.

Why does Jones wear a beard?
His wife knits his ties.

**EMPLOYERS MUST INSURE HELP
UNDER COMPENSATION ACT**

Phoenix, Nov. 26.—Failure on the part of employers to insure as required under the workmen's compensation act will necessitate drastic action on the part of the state industrial commission to compel observance of the law, according to a statement issued today by R. B. Sims, chairman of the commission. The statement follows:

"It has been brought to the attention of the industrial commission that there are employers who are not protecting their employes by insuring them as required by the workmen's compensation law.

"The law provides penalties for failure to comply therewith, but the commission, until this time, has not felt it necessary to resort to drastic measures for the enforcement of these penalties on negligent employers. However, ignorance of the law is no defense.

"It has come to the attention of the commission that there are still some employers without insurance who are either unmindful of the provisions of the law or are without regard for their own and their families' welfare, as well as the welfare of their employes and the ones dependent upon them.

"In case of accident, everything of value which an employer possesses might be taken to satisfy compensation which may be due. Therefore, they need this protection for their own sake. On the other hand, if the employer is without resources which he has taken, the employe, or his dependents, will be the ones to suffer, and again injustice is done.

"Some employes believe, and, in fact, have erroneously advised, that they will receive full compensation even though their employer has no insurance. This is not true, as they may receive compensation only to the

limit of their employer's resources. Those employes who correctly understand the situation, however, are now refusing to accept employment unless notices showing the employer to be insured are posted, and are also advising the commission when they find employers not protecting the men who work for them."

Mr. Sims further remarked that employers may obtain insurance either from the state or from one of the private carriers who may have an agent in their community.

**SOCIETY WOMAN AND ITALIAN
ARMY OFFICER HELD**

San Francisco, Nov. 24.—Mrs. Isabelle Keyes Burch, society matron of Hastings-on-Hudson, suburb of New York, was released on her own recognizance by United States Commissioner Francis Krull today in a hearing on charges that she and Captain Arnaldo Marson, former Italian army officer, violated the Man act in coming to California from New York together and living in close association here. Marson was released on \$1000 bonds. The couple were bound over to the federal grand jury for action.

Commissioner Krull notified Mrs. Burch and Captain Marson that they would be permitted to be together only in the presence of their attorney while the federal grand jury is considering their case.

Both insisted that they came to California on their own individual resources and had taken precautions to live up to every law governing their movements and association. Commissioner Krull admonished Captain Marson that his army training should have taught him to be more discreet, and the captain replied that he would accept the admonition with thanks.

Well, I was elected.
Honestly?
What difference does it make?

\$9.90

Made in a variety of equally pleasant styles for both women and misses. In the accepted colors for the season. For inexpensive dresses, you'll find the workmanship very careful.

MATRON'S VELVET GOWNS; VOGUE IS FOR METAL TRIM

WINTER moda assure the supremacy of velvet for informal daytime as well as formal evening wear.

This is admirably illustrated in the trim two-piece velvet frocks which are the very essence of smart style at this moment.

True, too, is this in regard to the very plain black velvet frocks which young girls have taken to wearing.

SHOWS REFINEMENT OF SIMPLICITY

lines and long close-fitting sleeves. With their neat lingerie collar and cuff sets are usually worn, those of Irish crochet or Italian filet being first in favor.

ADORABLE METALLIC CHAPEAUX

heavily at the front, also forming the inside of the new-style bell-shape cuffs.

On some of the most successful velvet daytime dresses hemstitched ruffles are arranged in tiers.

Novelty embroidered hats, the soft frameless kind, have come back into fashion.

Looking for a hat becoming to the point of flattery, are you? A chapeau lovely for the dance and eve-

ning wear, equally as charming as it tops one's furs on a wintry day?

The vogue for these whimsical confections of metal brocade, also silver or gold lace, is sweeping the country.

When one has a little cooked chicken this makes a most appetizing dish: Chicken a la King.

Jelly Omelet.—Separate the whites and yolks of two eggs; beat the whites until stiff.

Another nice dessert which one may have at hand for an emergency is stuffed dates.

Bricks of ice cream dipped in hot chocolate sauce; then repacked to chill, are well liked for a change from the ordinary ice cream.

Grated maple sugar mixed with thick cream and finely chopped almonds makes a most delicious sandwich.

Pineapple Puffs.—Cream one-third of a cupful of butter, and one cupful of sugar.

Pineapple Pudding.—Sprinkle one-half cupful of sugar over a can of crushed pineapple and set away to become chilled.

Pineapple Sherbet.—Boil two cupfuls of water with one cupful of sugar.

Sponge Cake With Pineapple.—Arrange pieces of sponge cake in a pint bowl; pour over as much of canned pineapple juice as the cake will absorb.

Tomatoes Stuffed With Pineapple.—Peel medium-sized tomatoes, remove the seeds and pulp.

Mad Dog? Myrtle—Marie went stumpy wild over that little dog Herbert as you see.

The KITCHEN CABINET

Life sees the world from its own viewpoint. Life meets its tasks as it shall choose. Life wins or falls at its own pleasure.

Daddy's Evening Fairy Tale

THE TARANTULAS

Nick and Nancy had been playing cars all day. Nick was the conductor, who called out the stations, and Nancy and her dolls were the passengers.

"What are they?" asked Nancy. "Animals?" "I know," said Nick. "They're like beetles, I saw pictures of some ones, but I don't know anything about them."

"They live," said Daddy, "in a little tunnel, which they line with silk, for they are very fussy over the looks of their homes and will never leave their tunnels lined with anything else."

"Once there was a family of tarantulas—a mother, a daddy, and four little tarantulas."

"The daddy tarantula had always been very successful in business, and so they had an especially fine home."

"Well, this little beetle in one of his attempts to shove a tarantula off the car in a hurry made the poor little tarantula stumble and fall and hurt himself."

"The little beetle felt very badly when he saw that he'd hurt the tarantula, and he said: 'I see what it is. We've been altogether too selfish, and at the next party we beetles will take turns with the tarantulas in being conductors and passengers.'"

As She Read It Harriet (aged seven)—Please, mother may I have some of that sauce? Mother—No, dear, you wouldn't like it, I am sure. It's parsley sauce.

English by Ear Professor—Give me a sentence with the word "boycott" in it. Pupil—Ernest Jones chased his son and didn't catch him till his boycott on a wire fence.

The Reason Teacher—Johnny, you flunked in French. I can't understand it. Johnny—I know; that's why I flunked, too.

Next! Teacher—Robert, give me a sentence using the word "pasture". Robert—I went past your horse last night.—Progressive Grocer.

Natural Consequence Sunday School Teacher—What will become of the man who feeds his body and neglects his soul? Bright Pupil—He'll get too fat.

Treaty Left Portion of Spain in France

Lleida, the geographical and political center of Europe, is a tiny islet of land which belongs geographically to Spain, but, nevertheless, is entirely surrounded by French territory.

So Lleida remains Spanish territory, a triangle of four square miles, with about 1,400 inhabitants. To reach Spain they must pass by a neutral road constructed to obviate customs and other difficulties.

Warning! Unless you see the name "Bayer" on package or on tablets you are not getting the genuine Bayer Aspirin.

There Are Others A high school boy drives to school every morning in a much dilapidated machine.

Cuticura Soap for the Complexion. Nothing better than Cuticura Soap daily and Ointment now and then as needed to make the complexion clear.

Optional "Mother, I want to go to a co-educational college." "But, my dear, isn't there a good deal of flirting?"

"Dandelion Butter Color" A harmless vegetable butter color used by millions for 50 years.

All He Had to Show "I sent a girl \$200 worth of flowers in the last six months." "Anything come of it?" "Yes; the bill."
